UI/UX TESTING REPORT

WEBSITE TESTED: BookMyShow

TESTING TYPE: User Interface / User Experience Testing

PREPARED BY:

E ALICE INNOCENT

ROLE:

SOFTWARE TESTING INTERN

SUBMISSION DATE:

11 March 2026

INTRODUCTION:

This report presents the results of UI/UX testing conducted on the BookMyShow website. The purpose if this testing is to identify issues related to layout, design consistency, responsiveness, and overall user experience. Various pages of the website were examined to detect interface problems and areas for improvement. The findings in this reports aim to enhance usability and ensure a better experience for users.

OBJECTIVE OF TESTING:

The objective of this UI/UX testing activity is to evaluate the visual and functional aspects of the BookMyShow website from a user interface perspective. By identifying these issues, the report provides insights that can help improve the interface design, ensure visual consistency across pages, and enhance the usability of the platform for end users.

SCOPE OF TESTING:

The scope of this UI/UX testing includes evaluating the following aspects of the website:

- Layout alignment and structure
- Color consistency and contrast
- Font consistency and readability
- Spacing and element alignment
- Visibility of UI elements
- Usability of navigation and interactive components

Pages tested:

- Home page
- Movies page
- Offers page
- Gift card page
- Support page voucher page

TESTING ENVIRONMENT:

PARAMETER	DETAILS
Website	BookMyShow
Browser used	Google chrome
Device	Laptop
Operating system	Windows 10
Testing type	Manual UI/UX testing
Tools used	Chrome Devtools
Testing approach	Exploratory UI testing

UI/UX ISSUES IDENTIFIED:

ISSUE ID	CATEGORY	PAGE	ISSUE DESCRIPTION	EXPECTED BEHAVIOUR	SEVERITY	SCREENSHOT REFERENCE
UI_01	Font/Spacing Issue	Home Page	The navigation item “ListYourShow” appears without proper spacing and should be displayed as “List Your Show”.	Words should have proper spacing to improve readability.	Low	Fig 1
UI_02	Font Consistency	Navigation Menu	Font size of top navigation items(Movies, Stream, Events, etc.)appears	Font size and style should remain consistent across	Low	Fig 2

			slightly different from secondary menu items (Corporates, Offers, Gift Cards).	navigation elements.		
UI_03	Layout Issue	Tamil Movie Page	The Filters panel on the left occupies a large width, leaving less space for movie cards.	Filter panel should be optimized to maintain balanced layout.	Low	Fig 3
UI_04	Layout/spacing issue	Movies page	Empty space appears below the filters panel while movie cards continue on the right side creating an unbalanced layout and unused page area.	The layout should adjust dynamically so the filter section height aligns with the movie content or the unused space is minimized .	Low	Fig 4
UI_05	UI placement issue	Support page	The floating chat/help button overlaps slightly with page content when scrolling down.	Floating button should not obstruct content visibility.	Medium	Fig 5
UI_06	Color contrast issue	Voucher page	The dark grey background behind the gift vouchers section reduces text readability slightly.	Text contrast should be optimized to improve readability.	Low	Fig 6
UI_07	Spacing issue	Voucher page	There appears to be large	Buttons should be	Low	Fig 7

			unused space below description text before the “Enquire” button.	positioned closer to the related content.		
UI_08	Visibility issue	Voucher page	The testimonial slider navigation dots appear overlapped and partially hidden under the testimonial content area, making them difficult to see or interact with.	Navigation dots should be clearly visible and properly spaced below the testimonial section.	Medium	Fig 8
UI_09	Layout issue	Voucher page	The page allows horizontal scrolling to the right, creating an empty white space area. Due to this layout overflow, the partner logos (such as ICICI bank) appear pushed towards the right side.	The page layout should prevent horizontal scrolling and keep all partner logos properly aligned within the container.	Medium	Fig 9
UI_10	Visibility issue	Gift cards page	The helper text below the input field (email/mobile message field) is present in the HTML but not visible on	The helper text should be clearly visible below the input below so users can understand	Medium	Fig 10

			the UI. The text appears hidden, making it unreadable for users.	the required input or validation message.		
UI_11	Color consistency	Offers page	Filter icons(UPI, Wallet card, Pay later) show slight color differences.	Icons should maintain uniform color and visible consistency.	Low	Fig 11
UI_12	Usability issue	Offers page	Scroll bar is not visible even though the page is scrollable.	A visible scrollbar should be present to indicate page navigation.	Low	Fig 12

CONCLUSION:

The UI/UX testing conducted on the BookMyShow website helped identify several interface-related issues affecting layout alignment, element visibility, color consistency, and usability. Although the website provides a visually appealing interface, addressing the identified issues can further enhance the overall user experience.

Resolving these issues will improve design consistency, reduce usability concerns, and ensure a smoother interaction for users across different sections of the platform. Continuous UI/UX testing is essential to maintain a high-quality user interface and deliver an optimal user experience.
